

TECA Data Safe

Going beyond IT disaster recovery to keep you in business

A history of delivering solutions to SMBs

Nearly a decade ago, it was difficult for small- to medium-sized businesses (SMB) to find reliable backup and disaster recovery solutions within their sometimes-limited means.

What was available at that time was geared toward Fortune 500 companies and major corporations with the resources to afford complex, expensive backup and recovery solutions.

Then in 2005, with the skill and technology needed to fill this void, the IT experts at TECA Data Safe began offering a backup and disaster recovery solution that fit the needs and finances of SMBs, as well as Fortune 500 companies, major corporations and government agencies.

It's critical to have a realistic and effective plan in place so that when (not if) disaster strikes, the cost to business is minimal.

From the beginning, TECA (Technology Equipment Coverage and Availability) has been a customer-driven enterprise, delivering the backup and disaster recovery solutions clients demanded, while innovating and creating new methodologies and technologies along the way. With superior, hands-on service and recovery solutions designed to fit your IT budget, TECA goes beyond disaster recovery to keep customers in business.

Innovation that ensures business continuity

From the start, while others simply offered the technology, TECA provided customers with the infrastructure, as well as the critical service needed to back up and recover valuable systems and data. As technology has evolved, TECA has approached customer solutions in innovative and creative ways, integrating cutting-edge virtual technology with industry best practices to offer the comprehensive, pioneering solutions they provide today.

Rapid Rebound

For express recovery to the cloud and beyond, Rapid Rebound enables a rapid-fire return to business after a disaster in as little as 6 to 24 hours.

TECA's Rapid Rebound service works with virtually any platform, offering cloud recovery and storage, as well as benefits at a local level. Additionally, Rapid Rebound affords customers access to TECA's IT experts, who ensure a quick and seamless return to business after a disaster.

Disaster Recovery & Recovery Planning

Disaster recovery begins long before disaster strikes. In fact, it's critical to have a realistic and effective plan in place so that when (not if) disaster strikes, the cost to business is minimal. To that end, TECA offers customers the tools needed to plan accordingly, including a downtime calculator, white papers, e-news articles, plus recovery testing, high-availability solutions and warm site recovery, all to the cloud.

Why TECA should be protecting your business

Why should you choose TECA Data Safe as your backup and disaster recovery solution? Quite simply, their cutting-edge technology works.

They can make this claim because they test their customers' systems once a year, or more, if necessary. The results prove the effectiveness of the solutions, while delivering peace of mind to the customers.

Additionally, TECA's multi-platform solution offers comprehensive coverage for an entire company's needs, while their responsive technicians and dispatch center offer access to recovery servers 24x7.

With flexible terms and solutions that are cost-effective, TECA services are well within the reach of a small- to medium-sized business budget, or that of a larger organization.

Finally, TECA continues to establish themselves as industry leaders by constantly exploring better, faster and more affordable ways to back up and recover their customers' valuable applications and data.

Doesn't your organization deserve the protection of industry-leading TECA Data Safe?
